

## **Capacity Building in conservation related aspects from community to institutional levels**

### **What it is**

Tailored training modules suitable at any level for the purposes of increasing skills and capacity in managing our natural responses and responding to conservation challenges.

Preparing the societies to adaptive climatic changes as way of enhancing coping mechanism for livelihoods

### **How we do it**

We track global trends and bring on board current issues that require new skills and knowledge for survival.

We also tap into indigenous knowledge (ITK) through participatory approaches to address the prevailing circumstances by providing appropriate skills suitable for every situation.

We undertake trainers of trainees drawn from the local communities and establish community volunteer networks for the sustainability

### **Benefits to you (if you engage our services)**

We create sustainable source of resourceful personals within affected communities

Back up trainers at anytime of the year when required

Develop simple training materials translated to different local languages

Carrier guidance

Specialized training modules for professionals

### **Case study of results**
